BUG-RDV-023

HIGH

OPEN

Build badge JS polling uses project identifier string in API call — returns 403, badge never auto-updates

Discovered in	TC-RDV-095
Requirement	CICD-001 — Build Status on Issues (rfd-010)
Environment	Local Docker (http://localhost:3008)
User role	Admin

STEPS TO REPRODUCE

- Navigate to Project "phoenix-platform" → issue with a linked build.
- Open browser DevTools → Network tab.
- Wait 30 seconds without refreshing the page.
- Observe the periodic XHR request made by the badge polling interval.

EXPECTED RESULT

JS polling calls /devops/builds.json?project_id=7 (numeric ID) every 30 s and badge DOM updates in-place on status change.

ACTUAL RESULT

The data-project-id attribute on the badge element contains the string identifier "phoenix-platform" instead of numeric ID 7. JS polling calls /devops/builds.json?project_id=phoenix-platform → HTTP 403. Badge DOM is never updated; a full page reload is required to see status changes.

FIX HINT

In the build badge view partial, change data-project-id="<%= @project.identifier %>" to data-project-id="<%= @project.id %>".

BUG-RDV-026**HIGH****OPEN**

JUnit ingestion endpoint returns 422 — missing rexml XML parser gem dependency

Discovered in	TC-RDV-122
Requirement	CICD-008 — JUnit Ingestion REST Endpoint (rfd-104)
Environment	Local Docker (http://localhost:3008)
User role	Admin (API key)
Downstream impact	TC-RDV-120, 121, 123, 124, 145, 146 all BLOCKED

STEPS TO REPRODUCE

1. Send POST `/devops/builds/3/test_results` with a valid JUnit XML body and X-Redmine-API-Key header.
2. Observe the HTTP response status and body.

EXPECTED RESULT

HTTP 201 Created with body `{"total":3,"passed":2,"failed":1,"skipped":0}`.

ACTUAL RESULT

HTTP 422 Unprocessable Entity: `{"error":"XML parser dependency missing: cannot load such file -- rexml/document", "code":"parse_error"}`. The rexml gem is not bundled with the plugin; Ruby 3.x no longer includes it in stdlib by default.

FIX HINT

Add gem `'rexml'` to the plugin's Gemfile (or `redmineflux_devops.gemspec` dependencies) and run `bundle install`.

BUG-RDV-027**HIGH****OPEN**

Build queue status widget missing — dashboards page shows placeholder only

Discovered in	TC-RDV-115, TC-RDV-116
Requirement	CICD-006 — Build Queue Status (rfd-077)
Environment	Local Docker (http://localhost:3008)
User role	Admin

STEPS TO REPRODUCE

1. Navigate to `/projects/phoenix-platform/devops/dashboards`.
2. Observe the page content.

EXPECTED RESULT

A "Build Queue" widget showing queue depth and median wait estimate (e.g. "4 waiting, ~8 min"). Cache TTL behaviour testable.

ACTUAL RESULT

Page renders with message "No custom dashboards yet." No built-in Build Queue widget is present. The `BuildQueueFetcher` service is not implemented; the dashboards feature is a stub.

BUG-RDV-029**HIGH****OPEN**

Pipeline stage breakdown not implemented — no stages section on build detail page

Discovered in	TC-RDV-125, TC-RDV-144, TC-RDV-148
Requirement	CICD-009 — Pipeline Stage Breakdown (rfd-108)
Environment	Local Docker (http://localhost:3008)
User role	Admin
Providers affected	GitHub Actions, Jenkins, GitLab CI (all three)

STEPS TO REPRODUCE

1. Navigate to any build detail page (e.g. `/projects/phoenix-platform/devops_builds/2`).
2. Scroll the page looking for a "Pipeline Stages" or "Stages" section.

EXPECTED RESULT

A "Pipeline Stages" section displays a linear Build → Test → Deploy timeline with status icons (green/red/gray) and per-stage durations.

ACTUAL RESULT

No "Pipeline Stages" section exists on any build detail page regardless of CI provider. The `BuildStageIngestor` service is not implemented; no stage data is stored or rendered.

MEDIUM SEVERITY (4)**BUG-RDV-024****MEDIUM****OPEN**

Build history date filter has no custom date range — only preset period dropdown

Discovered in	TC-RDV-100
Requirement	CICD-002 — Build History Timeline (rfd-011)
Environment	Local Docker (http://localhost:3008)
User role	Admin

STEPS TO REPRODUCE

1. Navigate to Project "phoenix-platform" → DevOps → Builds.
2. Inspect the filter bar for date controls.

EXPECTED RESULT

Two date-picker inputs labelled "From" and "To" allowing a custom date range (e.g. 2026-05-10 to 2026-05-15).

ACTUAL RESULT

Only a preset dropdown is present with options: "Last 7 days / Last 30 days / Last 90 days / All time". No `date_from` / `date_to` custom pickers.

BUG-RDV-028**MEDIUM****OPEN**

Artifact download links section shows no artifacts for completed builds

Discovered in	TC-RDV-117
Requirement	CICD-007 — Artifact Download Links (rfd-078)
Environment	Local Docker (http://localhost:3008)
User role	Admin
Downstream impact	TC-RDV-118, TC-RDV-119 BLOCKED

STEPS TO REPRODUCE

1. Navigate to build #513 (status: success) detail page.
2. Locate the "Artifacts" section.

EXPECTED RESULT

Artifacts section lists available files (e.g. `app-v2.3.1.apk`, `test-report.html`) with file sizes and download links.

ACTUAL RESULT

"No artifacts available for this build." is displayed. Artifact metadata fetch from the GitHub Actions API is not implemented. The proxy download endpoint and direct-redirect logic (50 MB threshold) are therefore also untestable.

BUG-RDV-030**MEDIUM****OPEN**

Slack and Microsoft Teams notification channels absent from DevOps notification preferences

Discovered in	TC-RDV-128, TC-RDV-131
Requirement	CICD-010 — Build Notifications (rfd-109)
Environment	Local Docker (http://localhost:3008)
User role	Admin

STEPS TO REPRODUCE

1. Log in and navigate to `/my/devops_notifications`.
2. Observe the available notification channel columns.

EXPECTED RESULT

Notification preferences table shows columns: Email, In-app, Slack, Microsoft Teams — each toggleable per event type.

ACTUAL RESULT

Only "Email" and "In-app" columns are present. Slack and Microsoft Teams channel configuration is absent from the UI. The `RedminefluxSlack.speak` and `RedminefluxTeams::TeamsMessage` dispatch paths are not exposed to users.

BUG-RDV-031

MEDIUM

OPEN

Build run duration not stored or displayed — webhook run_duration_ms field silently ignored

Discovered in

TC-RDV-134, TC-RDV-150

Requirement

CICD-002 — Build History Timeline (rfd-011)

Environment

Local Docker (http://localhost:3008)

User role

Admin

STEPS TO REPRODUCE

1. Send a workflow_run completed webhook with run_duration_ms: 187000 to POST /devops/webhook/github/phoenix-platform.

2. Navigate to the Builds list for phoenix-platform.

3. Check the Duration column for the build.

4. Navigate to the linked issue DevOps panel and check the build badge text.

EXPECTED RESULT

Duration column shows "3m 7s". Build detail page shows "DURATION: 3m 7s". Badge reads "Build #513 passed (3m 7s)".

ACTUAL RESULT

Duration column shows "—" for all builds including those sent with run_duration_ms: 187000. Build detail page shows "DURATION: N/A". Badge reads "Build #513 success" with no duration. The run_duration_ms field is silently ignored by the webhook background job and never persisted to the database.

FIX HINT

In the webhook payload processor, map payload[:run_duration_ms] to the builds.run_duration_ms column. Update the build badge partial and duration formatter to render the stored value.

Suite 03 Execution Summary		
Result	Count	TC IDs (sample)
PASS	20	091–094, 096–099, 101–102, 108, 112–113, 132–133, 138–140, 142, 147
