Testcase Management — Regression Testing Report — 2026-10-21

Triggered by BUG-TCM-079's closure (High severity !’ full affected-suite regression, SENIOR_QA_STANDARDS.md §26).
Scope: the entire CSV Import suite, since the fix touches the shared length-validation code path used by every CSV import.

Test Case Execution

TC ID | Result
TC-TCM-021 | PASS
TC-TCM-023 | PASS
TC-TCM-025 | PASS
TC-TCM-026 | PASS
TC-TCM-027 | PASS
TC-TCM-028 | PASS
TC-TCM-029 | PASS
TC-TCM-030 | PASS (expected result intentionally changed — see Notes)
TC-TCM-031 | PASS (expected result intentionally changed — see Notes)
TC-TCM-032 | PASS (expected result intentionally changed — see Notes)
TC-TCM-033 | PASS
TC-TCM-034 | PASS
TC-TCM-035 | PASS
TC-TCM-036 | PASS
TC-TCM-037 | PASS
TC-TCM-275 | PASS
TC-TCM-276 | PASS
TC-TCM-277 | PASS
TC-TCM-279 | PASS

Summary: 19 executed — 19 Pass / 0 Fail / 0 Blocked / 0 Skipped

Bugs / Defects Found

None — this is a clean regression pass following BUG-TCM-079's fix (see TCM-Retest-2026-10-21.md for the bug
closure itself).

Regression Results

- Re-ran all 18 pre-existing CSV import fixture files (automation/testdata/csv-test-data/01 through 20, minus one unrelated encoding-dependent variant not touched by this fix) against the fixed build — zero new failures.
- Added and executed TC-TCM-279: created a required custom field on the Testcase tracker, imported a CSV with
no column for it. Confirmed the plugin's existing, documented design — a missing required custom field produces
a warning only ("Required custom field '...' is missing or empty; importing without it."), and never blocks import. All 5 test cases in the test file were created successfully despite the missing field.
- Intentional, non-regression behavior change on three pre-existing TCs, caused by BUG-TCM-079's fix itself:
- TC-TCM-030 (2000-char step, previously the boundary): still PASS, now simply well under the new limit.
- TC-TCM-031 (2001-char step, previously rejected as "just over the limit"): now imports successfully — correct, since 2001 is nowhere near the new 40000-char ceiling. This is the exact outcome the client's fix request was asking for, not a defect.
- TC-TCM-032 (2500-char "oversized" step, previously rejected): now imports successfully — same reasoning.
- The real "just over the limit" boundary is now owned by TC-TCM-276 (40000 valid / 40001 rejected).
- No other suite was affected — the fix is scoped entirely to TestcaseImportController#step3's length check.

Notes / Findings

- Redmine Version: 6.x (Docker)
- Environment: Docker localhost:3015 (C:\crux-redmine), project test

- Test Date: 2026-10-21
- Full evidence and per-file breakdown in the "Regression Run — 2026-10-21" table at the bottom of testcases/TESTCASE_MANAGEMENT_CSV_IMPORT.md.
