Testcase Management — Retest Testing Report — 2026-10-21

Test Case Execution

TC ID | Result
TC-TCM-275 | PASS
TC-TCM-276 | PASS
TC-TCM-277 | PASS

Summary: 3 executed — 3 Pass / 0 Fail / 0 Blocked / 0 Skipped

Bugs / Defects Found

Bug ID | Title | Severity | Status | Production Redmine Issue ID
BUG-TCM-079 | CSV Import still hard-rejects any step/expected-result content over 2000 characters | High | Closed — retest PASS | #124155 !’ Done, 100%

Fix Verification / Retesting

- Fix: TestcaseImportController#step3 no longer hard-codes 2000 — it now reads the real limit dynamically from the column definition (Step.columns_hash['step'/'expected'].limit) and uses it in both the length comparisons and the error message text. Matches this bug's own Suggested Fix exactly, so it can never drift out of sync with the column migration again.
- Restarted C:\crux-redmine to pick up the fix, confirmed the source change directly.
- TC-TCM-275 (Jira/Zephyr migration CSV — 5,000/15,000/35,000-char expected, plus a 12,000-char step): all 4 rows now show OK, 0 errors. Completed the import and confirmed via direct DB query (length(step)/length(expected)) that every value was saved at its exact original length — zero truncation.
- TC-TCM-276 (exact 40000/40001-char boundary): the exactly-40,000-char row is now OK (DB-confirmed length(step) = 40000), and the 40,001-char row is still correctly rejected — now with the corrected error message ("...exceeds the maximum length of 40000 characters (got 40001)" instead of the stale "2000 characters").
- TC-TCM-277 (baseline short-content regression, legacy format): unchanged — 4 correct / 1 expected warning / 0 errors, identical to the pre-fix and original 2026-09-11 baseline. No regression.
- Verdict: FIXED. The client's actual motivating use case (migrating long Jira/Zephyr test cases via CSV import) now works end to end, at every length tested from 5,000 up to and including the exact new 40,000-char ceiling, with zero truncation and zero regression to ordinary short-content imports.
- BUG-TCM-079 moved to bugs/closed/; production #124155 synced to Done/100% with a retest-confirmation note citing the fix and all three retested scenarios.

Notes / Findings

- Redmine Version: 6.x (Docker)
- Environment: Docker localhost:3015 (C:\crux-redmine), project test
- Test Date: 2026-10-21
- Full CSV Import suite regression triggered by this closure (High severity !’ whole affected suite, per SENIOR_QA_STANDARDS.md §26) — see TCM-Regression-2026-10-21.md.
