

Suite 04 Bug Report — Redmineflux DevOps Plugin

Deployments Suite (TC-RDV-151 to TC-RDV-210) — Session 9 — 2026-05-25

Plugin: redmineflux_devops v0.1.0 **Redmine:** 6.0.9 **Environment:** Local Docker (http://localhost:3008) **Tester:** Claude (AI QA via MCP Playwright)

Suite TCs: 60 (TC-RDV-151–210) | **PASS:** 26 | **FAIL:** 19 | **BLOCKED:** 15 **New Bugs this Suite:** 7 (BUG-RDV-032 to BUG-RDV-038)

BUG-RDV-033 HIGH OPEN

ArgoCD provider not supported — canary and progressive rollout features entirely blocked

Affected TCs	TC-RDV-174, TC-RDV-175, TC-RDV-176, TC-RDV-193, TC-RDV-194
Requirement	DEP-008 — Canary/Progressive Rollout
User Role	Admin
Screenshot	screenshots/TC-RDV-193/ (BLOCKED)

STEPS TO REPRODUCE

- POST to /projects/phoenix-platform/devops_connections with provider=argocd.
- Observe the HTTP response status and body.
- Alternatively, inspect the provider dropdown in the Add Repository form for an ArgoCD option.

Expected: ArgoCD listed as a supported CI/CD provider. Connection creation succeeds. Canary rollout webhook events (with rollout_percent 0–100) are accepted and processed.

Actual: POST returns HTTP 400 immediately. SUPPORTED_PROVIDERS = [github, gitlab, bitbucket, jenkins, sonarqube, fossa, prometheus, datadog, zabbix, pagerduty] — ArgoCD is absent. All canary rollout, progressive deployment, and ArgoCD sync features are entirely untestable. 5 TCs blocked.

BUG-RDV-035

HIGH

OPEN

No issue-deployment linkage on deployment detail or issue pages

Affected TCs TC-RDV-155, TC-RDV-156, TC-RDV-189, TC-RDV-197, TC-RDV-207
Requirement DEP-001 — Deployment History / rfd-014
User Role Admin
Screenshot screenshots/TC-RDV-197/ (FAIL)

STEPS TO REPRODUCE

1. Send a GitHub push webhook referencing an issue number in the commit message (e.g., "Fix #3 login error").
2. Navigate to the resulting deployment detail page at /projects/phoenix-platform/devops_deployments/<id>.
3. Navigate to the referenced Redmine issue (e.g., /issues/3).
4. Inspect both pages for issue-deployment linkage.

Expected: Deployment detail shows an "Issues Included" section listing resolved/referenced issues. Issue detail shows a "Deployments" section or badge with the deployment version and environment.

Actual: No "Issues Included" section on deployment detail. Issue pages show no deployment badge, widget, or sidebar section. Feature (rfd-014) is not implemented. 5 TCs fail.

BUG-RDV-037

HIGH

OPEN

Multiple concurrent pending_approval deployments accepted for the same environment

Affected TCs TC-RDV-183
Requirement DEP-004 — Deployment Approval Gate
User Role Admin
Screenshot screenshots/TC-RDV-183/ (FAIL)

STEPS TO REPRODUCE

1. Configure environment (e.g., staging, env_id 3) with approval_required = true.
2. POST a deploy to the environment — first deployment created with status pending_approval.
3. Immediately POST a second deploy to the same environment without approving or rejecting the first.
4. Check the deployments list for the environment.

Expected: Second deploy attempt is blocked with an error: "A deployment is already pending approval for this environment." Only one pending_approval deployment exists per environment at a time.

Actual: Second deploy returns HTTP 302 success. Deployments list shows multiple records with pending_approval status for the same environment simultaneously (confirmed: deployments #17, #18, #19 all showing staging/pending). Approval queue integrity is broken.

BUG-RDV-032

MEDIUM

OPEN

Deploy button not disabled when environment is locked or has an active freeze window

Affected TCs	TC-RDV-169, TC-RDV-181
Requirement	DEP-006 / DEP-009 — Lock & Freeze pre-flight
User Role	Admin
Screenshot	screenshots/TC-RDV-181/tc-rdv-181-pass.png

STEPS TO REPRODUCE

1. Lock an environment with a future locked_until date. Navigate to /devops_environments.
2. Observe the Deploy button on the locked environment card.
3. Alternatively, create an active freeze window for the environment and repeat.

Expected: Deploy button is visually disabled (grayed out, disabled attribute, or hidden) with a tooltip indicating the environment is locked or frozen.

Actual: Deploy button remains fully enabled for locked and frozen environments. Server correctly enforces the block (HTTP 423 for freeze, flash "Deployment blocked — environment is locked" for lock), but the UI gives no pre-emptive indication. Users discover the block only after attempting deployment.

BUG-RDV-034

MEDIUM

OPEN

Deployment detail page shows no clickable commit SHA link and no deployment URL field

Affected TCs	TC-RDV-186
Requirement	DEP-001 — Deployment History detail fields
User Role	Admin
Screenshot	screenshots/TC-RDV-169/

STEPS TO REPRODUCE

1. Send a GitHub deployment_status webhook with a valid deployment.sha and deployment_status.target_url.
2. Navigate to the resulting deployment detail page.
3. Inspect the COMMIT and URL fields.

Expected: COMMIT field shows the SHA as a clickable hyperlink to the remote repository commit. A "Deployment URL" field is visible, showing the target_url from the webhook payload.

Actual: COMMIT field shows "—" (even when commit_sha is stored in the DB, confirmed via TC-RDV-195). No "Deployment URL" field on the detail page. Users cannot navigate to the remote commit or deployment environment from Redmine.

BUG-RDV-036

MEDIUM

OPEN

After rollback, original deployment detail shows no "Reverted by" reverse link

Affected TCs	TC-RDV-199
Requirement	DEP-005 — Rollback tracking / bi-directional audit trail
User Role	Admin
Screenshot	screenshots/TC-RDV-176/

STEPS TO REPRODUCE

1. Navigate to a successful deployment (e.g., deployment #5).
2. Create a rollback from that deployment via /devops_deployments/5/create_rollback.
3. Confirm the rollback deployment is created (new record visible in list).
4. Navigate back to the original deployment detail page (#5).

Expected: Original deployment detail (#5) shows a "Reverted by deployment #N" reference with a link to the rollback record, completing the bi-directional audit trail.

Actual: Original deployment #5 shows no "Reverted by" section. The rollback detail correctly links back to the original ("Rollback of #5"), but the reverse link is absent — tracing from original to rollback is not possible via UI.

BUG-RDV-038

LOW

OPEN

Environment cards not ordered by environment type hierarchy (dev → staging → production)

Affected TCs	TC-RDV-206
Requirement	DEP-002 — Environment Dashboard display order
User Role	Admin
Screenshot	screenshots/TC-RDV-151/

STEPS TO REPRODUCE

1. Create environments: production, uat, dev, staging (in any creation order).
2. Navigate to /projects/phoenix-platform/devops_environments.
3. Observe the order of environment cards on the dashboard.

Expected: Environments displayed in logical pipeline order: dev → staging → uat → production (mirroring the software delivery lifecycle).

Actual: Environments displayed in creation/position-column order: production, uat, dev, staging. The deployment filter dropdown on the Deployments list follows the same incorrect order.
