

redmineflux_devops — Bug Report

Suite 08 — Monitoring & Alerting | 4 open bugs | Redmine 6.0.9 | Generated 2026-05-28

Plugin: **redmineflux_devops** | Environment: Local Docker (http://localhost:3008) | Status: **Open**

BUG-RDV-052 High Auto-created incidents use "Bug" tracker instead of "Incident" tracker

Steps to Reproduce	1. POST critical Prometheus AlertManager webhook to /devops/webhook/prometheus/phoenix-platform. 2. Navigate to /devops_incidents. 3. Click linked Redmine issue and inspect the Tracker field.
Expected Result	Auto-created incident uses tracker = "Incident" (ID 3). Priority = "Urgent".
Actual Result	Auto-created issue uses tracker = "Bug" (ID 4). AlertIncidentCreator hard-codes Bug tracker. Confirmed on issues #34, #35, #37, #38.
Affected TCs	TC-RDV-337 (FAIL), TC-RDV-370 (FAIL)

BUG-RDV-053 Medium Alert feed has no environment filter — only severity and status filters available

Steps to Reproduce	1. Navigate to /projects/phoenix-platform/devops_alerts. 2. Observe the filter controls.
Expected Result	Alert feed includes environment filter dropdown. Selecting "production" shows only production-tagged alerts.
Actual Result	Only two filters: Severity and Status. No environment filter. ?environment=production shows all alerts unfiltered.
Affected TCs	TC-RDV-332 (FAIL)

BUG-RDV-054 High On-call schedule feature not implemented — no widget on any DevOps page

Steps to Reproduce	1. Navigate to any DevOps page (/devops_builds, /devops_environments, /devops_alerts, /devops_incidents). 2. Search for on-call schedule widget.
Expected Result	On-call schedule sidebar widget showing current on-call person and shift end time. Configurable for PagerDuty/Opsgenie.
Actual Result	No on-call widget on any DevOps page. HTML contains no reference to "on-call", "pagerduty", or "opsgenie". Feature entirely absent.
Affected TCs	TC-RDV-342, TC-RDV-343, TC-RDV-344, TC-RDV-345, TC-RDV-366 (all BLOCKED)

BUG-RDV-055 High Infrastructure resource usage gauges not implemented — no CPU/Memory/Disk on environment cards

Steps to Reproduce	1. Navigate to /projects/phoenix-platform/devops_environments. 2. Observe environment cards. 3. Look for CPU, Memory, Disk gauges.
Expected Result	Each card shows CPU %, Memory %, Disk % gauges with color thresholds (green <70%, amber 70-89%, red ≥90%).
Actual Result	Cards show only uptime widget. No gauge, cpu, memory, or resource elements in page HTML. rfd-118 feature entirely absent.
Affected TCs	TC-RDV-350–355, TC-RDV-368, TC-RDV-369 (all BLOCKED)
