

redmineflux_devops — Bug Report

Suite 11 — Environment Management | 6 open bugs | Redmine 6.0.9 | Generated 2026-05-28

Plugin: **redmineflux_devops** | Environment: Local Docker (http://localhost:3008) | Status: **Open**

BUG-RDV-072 High Environment form missing environment_type field (dev/staging/prod/custom)

Steps to Reproduce	1. Navigate to Project → DevOps → Environments. 2. Click "Add Environment". 3. Observe form fields.
Expected Result	Form contains environment_type dropdown: dev, staging, prod, custom. Selecting "prod" auto-assigns is_production = true.
Actual Result	No environment_type dropdown. Only is_production boolean checkbox. List not ordered by environment type.
Affected TCs	TC-RDV-461 (FAIL), TC-RDV-464 (FAIL), TC-RDV-465 (FAIL)

BUG-RDV-073 High No "Check Now" button for manual environment health status trigger

Steps to Reproduce	1. Navigate to Project → DevOps → Environments. 2. Look for "Check Now" button on each environment card. 3. Test POST .../check_health and .../health_check routes.
Expected Result	Each environment card has "Check Now" button. Clicking triggers AJAX health check without page reload.
Actual Result	No "Check Now" button on any card. POST .../check_health and .../health_check return HTTP 404.
Affected TCs	TC-RDV-466–471 (all BLOCKED)

BUG-RDV-074 High Admin has no "Override Freeze" option — active deployment freeze blocks Admin unconditionally

Steps to Reproduce	1. Create active deployment freeze. 2. Log in as Admin. 3. Click "Deploy" for frozen environment. 4. Observe whether "Override Freeze" option is presented.
Expected Result	Admin sees "Override Freeze" option with mandatory reason field. Override recorded in audit log.
Actual Result	Deploy button disabled. No override option in deploy modal. API returns HTTP 423. No freeze_override audit entry ever created.
Affected TCs	TC-RDV-475 (FAIL)

BUG-RDV-075 High Environment Request submission causes 500 error; no custom fields or auto-assignment

Steps to Reproduce	1. Navigate to Project → DevOps → Request Env. 2. Fill all fields and click "Submit". 3. Navigate to newly created issue URL.
Expected Result	Issue created with "Environment Request" tracker. All 5 custom fields populated. Auto-assigned. Redirect shows HTTP 200.
Actual Result	Issue #40 created ✓ but redirect → 500 error. Direct issue URL also 500. custom_fields: [] empty. assigned_to: {} empty.
Affected TCs	TC-RDV-482 (FAIL)

BUG-RDV-076	Medium	Environment comparison returns 302 redirect for non-existent environment ID instead of 404
Steps to Reproduce	1. GET /projects/phoenix-platform/devops_environments/compare?a=1&b=999 (env ID 999 does not exist)	
Expected Result	HTTP 404 response returned. No environment data exposed.	
Actual Result	HTTP 302 redirect returned. Compare endpoint does not validate that both environment IDs exist and belong to current project.	
Affected TCs	TC-RDV-487 (FAIL)	

BUG-RDV-077	Low	REST API type filter for environments not exposed — /devops/environments.json?type= returns 404
Steps to Reproduce	1. GET /projects/phoenix-platform/devops/environments.json?type=production 2. GET /projects/phoenix-platform/devops/environments.json?type=dev	
Expected Result	type=production returns only production-flagged environments. type=dev returns only dev environments.	
Actual Result	Both requests return HTTP 404. Route /devops/environments.json does not exist. Existing /devops_environments.json returns all with no type filtering.	
Affected TCs	TC-RDV-494 (FAIL)
